

Customer Journey Map

Project

Rising Water – AI-Based Flood Prediction System

Awareness

User hears about the flood prediction system through social media, local authorities, or community programs.

Consideration

User understands the benefits of receiving early flood predictions and decides to try the system.

Usage

User enters environmental parameters into the application and receives flood probability with a risk level.

Decision

User takes preventive actions such as protecting property, moving valuables, or evacuating if required.

Outcome

User experiences reduced losses, improved safety, and increased confidence in disaster preparedness.

Pain Points

- Late disaster warnings
- Limited access to prediction tools
- Property and crop damage
- Lack of preparedness

Opportunities

- Provide accurate early predictions
- Improve community awareness
- Reduce economic losses
- Support disaster management authorities
