

Communication

Project: Rising Water – AI-Based Flood Prediction System

1. Project Introduction

Rising Water is an AI-powered flood prediction system developed using Machine Learning to estimate flood probability from environmental parameters.

2. Target Audience

- Citizens living in flood-prone areas
- Farmers
- Disaster management authorities
- Researchers and students

3. Key Messages

- Early prediction helps reduce flood impact.
- Machine Learning improves decision support.
- The application is simple and easy to use.
- The system classifies risk as Low, Medium, or High.

4. Communication Channels

Channel	Purpose
GitHub	Share source code
LinkedIn	Project showcase
Project Demonstration	Explain working
Presentation	Academic evaluation

5. Conclusion

Effective communication helps users understand the project's objectives, benefits, and practical applications.
