

Project Executable Files

Project: Rising Water – AI-Based Flood Prediction System

1. Purpose

This document describes the executable components required to run the Rising Water application.

2. Required Files

File / Folder	Purpose
app.py	Starts the Flask application
models/flood_model.pkl	Trained XGBoost model
models/scaler.pkl	Saved feature scaler
templates/index.html	User interface
static/style.css	Application styling
requirements.txt	Python dependencies
dataset/	Training dataset

3. Steps to Run

1. Install Python and required packages.
2. Run: `pip install -r requirements.txt`
3. Open the project folder in VS Code.
4. Run: `python app.py`
5. Open `http://127.0.0.1:5000` in a browser.
6. Enter the input values and click 'Predict Flood Risk'.

4. Expected Output

The application displays the predicted flood probability and the corresponding Low, Medium, or High risk level.

5. Conclusion

All executable files are organized in a modular structure, making the application easy to run, maintain, and deploy.
