

Use Case Description

Project: Rising Water – AI-Based Flood Prediction System

Field	Description
Use Case ID	UC-01
Use Case Name	Predict Flood Risk
Primary Actor	User
Goal	Predict flood probability and display risk level.
Preconditions	Application is running and model is loaded.
Trigger	User clicks 'Predict Flood Risk'.
Main Flow	1. User opens app. 2. Enters 20 parameters. 3. Clicks Predict. 4. System preprocesses input. 5. ML model predicts probability. 6. System displays probability and Low/Medium/High risk.
Alternative Flow	If invalid or missing input is entered, the system requests valid values.
Postconditions	Prediction result is displayed successfully.

Conclusion

This use case describes the complete interaction between the user and the Rising Water application for generating a flood prediction.
